

Damir Biyankho

FULL-STACK ENGINEER

I build business automation platforms: ERP dashboards, mobile attendance systems, AI assistants, integrations, notifications, document generation, and production-ready admin workflows.

PORTFOLIO

aldamiram.vercel.app

TARGET ROLE

Web Developer

Frontend / Backend JavaScript, TypeScript, React

Desired Salary

350 000 KZT net

Work Format

Full-time or part-time, employer location, Almaty/Kazakhstan

CORE STACK

React TypeScript Node.js
Express MongoDB Mongoose
Redux Flutter Firebase
Supabase Redis Vercel
DigitalOcean Docker

SPECIALTIES

ERP systems SaaS AI automation
RBAC JWT/OAuth 1C integration
Geofencing Maps SDK
Telegram bots Push notifications
DOCX/PDF Sentry

EDUCATION

Cyber Security and Networks

IT Academy STEP, 2025 - Present

JavaScript Developer

IT Academy STEP, 2022 - 2023

Information Systems

Full-stack developer focused on ERP, SaaS and AI-powered automation

Strong in turning operational business needs into complete systems: admin panels, secure APIs, mobile workflows, data sync, background jobs, external integrations and deployment. Comfortable owning both product-facing UI and backend architecture.

WORK EXPERIENCE

AutoData - Web Developer

Dec 2023 - Mar 2024

Company: salescout.me/ru/ | Stack: JavaScript, TypeScript, React, MongoDB, caching, UI components

- Developed new product structures and reworked existing frontend/backend flows in a commercial web product.
- Migrated data from MongoDB and wrote scripts for selecting and moving specific database records.
- Cached data and optimized pages to improve site speed and reduce repeated loading.
- Built user-facing interface logic and reusable components to make the product more convenient for daily use.
- Worked in a team environment with Jira, Bitbucket and Confluence.

TECHNICAL PROFILE

Frontend

React, TypeScript, Vite, Next.js, Ant Design, MUI, Redux, Zustand, Tailwind CSS, Framer Motion.

Backend

Node.js, Express, MongoDB, Mongoose, Typegoose, REST APIs, JWT/OAuth, RBAC, node-cron.

Automation

Telegram bots, document generation, database scripts, caching, background jobs, Google Drive sync.

Product Delivery

Admin dashboards, ERP modules, SaaS workflows, mobile attendance flows, maps and notifications.

PROFESSIONAL DEVELOPMENT

- JavaScript full course, IT Academy STEP, 2024.
- Front-End development on JavaScript, Computer Academy STEP, 2024.
- Diploma Front-End, 2024.
- Currently studying Cyber Security and Networks to strengthen secure architecture, infrastructure and network fundamentals.

ADDITIONAL EXPERIENCE

- Can build client and admin interfaces with Ant Design, including forms, tables, dashboards and protected flows.
- Can create Telegram bots that parse listings and automate notifications for services such as OLX, Roof and Kolesa.
- Comfortable with PC hardware, low-current systems basics, proxies and engineering-oriented troubleshooting.
- Driver's license category B.

HOW I WORK

Business-first thinking

I try to understand the real workflow before building screens: who uses the system, what data changes, and what must be automated.

Full-cycle ownership

I can move between UI, API, database, integrations, background jobs and deployment without losing the product context.

Practical optimization

Experience with caching, page optimization, database record scripts and reducing repeated data loading in real web products.

Team collaboration

Worked with Jira, Bitbucket and Confluence; comfortable discussing tasks, reviewing code and adapting to existing project structure.

TOOLS I USE IN REAL PROJECTS

- Frontend: React, TypeScript, Vite, Next.js, Ant Design, MUI, Redux, Zustand, Tailwind CSS.
- Backend: Node.js, Express, MongoDB, Mongoose, Typegoose, REST API, JWT, OAuth, RBAC.
- Operations: Git, GitHub, GitLab, Bitbucket, Jira, Confluence, Postman, Vercel, DigitalOcean, Sentry.
- Integrations: Telegram Bot API, Firebase, Google Cloud Translation API, maps SDKs, 1C, DOCX/PDF generation.

ENGINEERING FOCUS

Business automation

Admin dashboards

Data synchronization

AI assistants

Mobile field workflows

Localization

Security basics

Monitoring

PRODUCTION STATUS

Detsad ERP

Actively used by real users for daily kindergarten management workflows.

Selected engineering projects with real product workflows

A deeper view of the systems behind my portfolio: enterprise dashboards, mobile attendance, SaaS learning flows, localization automation, search integrations and interactive UI work.

SELECTED ENGINEERING WORK

Detsad ERP - Management Platform

Active production ERP

Enterprise-style platform for kindergarten operations: finance, nutrition, medicine, attendance, notifications and daily administration. The system is currently actively used by real users in day-to-day workflows.

Stack: React, TypeScript, Vite, MUI, Redux, Node.js, Express, MongoDB, Firebase, node-cron, 1C, Groq, Gemini

- Designed modules for operational work instead of isolated demo screens: dashboards, forms, reports, protected routes and admin flows.
- Maintained the platform around active usage needs, improving real workflows instead of building only static portfolio features.
- Implemented 1C Accounting integration for financial reconciliation and data synchronization.
- Integrated AI modules with Groq Llama-3 and Gemini API for project-aware analysis and assistant workflows.
- Automated DOCX/PDF generation, recurring financial jobs, Telegram notifications and Firebase push messages.

Demo: aldamiram.vercel.app

Repos: detsad_f, detsad_b

Detsad Mobile - Field Staff Attendance App

Flutter + GPS

Mobile field workflow for staff attendance with location validation and map-based interaction.

Stack: Flutter, Dart, Firebase, GPS, Geofencing, Yandex Maps SDK, Push Notifications

- Developed attendance tracking with GPS monitoring and geofencing-based validation.
- Integrated maps and location-aware UX for field staff and administrative scenarios.
- Designed offline-first behavior for reliable attendance marking when network quality is unstable.

Repo: detsad_m

Uyghur Learn - SaaS / LMS Platform

SaaS + RBAC

Multi-repository learning platform with course, lesson, community and protected account workflows.

Stack: React, TypeScript, Ant Design, i18n, Node.js, Express, MongoDB, Nodemailer, JWT, RBAC

- Built learning management flows for courses, lessons and community features.
- Implemented secure email verification with Nodemailer and role-based access control for different user groups.
- Added protected user flows, content management and rate-limiting oriented security.

Demo: ur-front.vercel.app

Repos: ur-front, ur-ba

Garden Park Inn - Hospitality Management Platform

Localization + Admin

Restaurant/hospitality platform with multilingual menu workflows, admin management and financial helpers.

Stack: React, TypeScript, Ant Design, Tailwind CSS, Node.js, Express, MongoDB, Google Cloud Translation API

- Created an admin dashboard for menu, content and price management.
- Automated menu localization into 9 languages through Google Cloud Translation API.
- Integrated external currency rates and dietary categorization: halal, vegetarian and allergen-aware labels.

Demo: gardenparkinn.vercel.app

Repos: GFrontend, GBackend

ADDITIONAL PROJECTS

SearchX

Search-oriented product aggregating external API data with favorites and Supabase-backed user features.

Universe

Interactive 3D experience with Three.js, React Three Fiber, GSAP, Zustand and state-driven visual flows.

WHAT I CAN BRING TO A TEAM

- End-to-end delivery: from business problem and data model to UI, API, integrations, deployment and maintenance.

- Automation mindset: background jobs, document generation, bots, notifications, AI assistants and data sync.
- Product sensitivity: dashboards and workflows designed for real daily operations, not only technical demos.
- Security basics: JWT/OAuth flows, RBAC, rate limiting, monitoring and current cybersecurity studies.
